

INFLATION HOLDS STEADY

Consumers paid 2.1 per cent more in March 2013 than they did a year ago for the basket of goods and services included in the Consumer Price Index (CPI). This level of inflation was unchanged from the level measured in February 2013.

Between February 2013 and March 2013, the average cost of goods and services in the Consumer Price Index rose 0.2 per cent. The all-items index increased from 120.6 to 120.9 index points in March. This means that the basket of goods and services that cost \$100.00 in April 2006 now cost \$120.90.

YEAR-TO-YEAR ANALYSIS

The Health & Personal Care sector continued to be the largest contributor to the twelve-month increase in the Consumer Price Index. This sector contains items such as the cost of doctor's visits, health insurance, prescribed & self-prescribed drugs and toiletries. The annual increase for this sector was 7.7 per cent.

The Food and Transport & Vehicles sectors also impacted strongly on the annual rate of inflation, advancing by 3.2 per cent and 3.9 per cent, respectively.

**Inflation
Rate
2.1%**

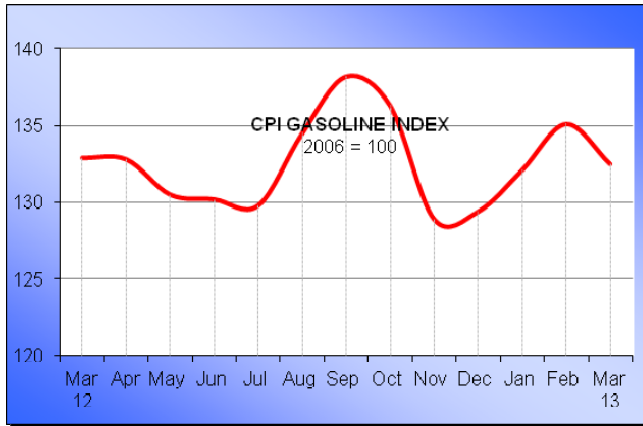

The compilation of the CPI involves the processing of several thousand price quotations. The Department of Statistics wishes to acknowledge the cooperation of the business community in supplying the required price data.

SUMMARY STATISTICS

MONTH-TO-MONTH ANALYSIS

Transport & Vehicles

The Transport & Vehicles sector increased 1.4 per cent in March, following a 1.3 per cent rise in February. The average cost of overseas hotel accommodations increased by 9.9 per cent. In contrast, premium and mixed gas prices fell 1.9 per cent and 2.3 per cent, respectively.

Fuel & Power

Consumers paid 2.8 per cent more for electricity causing the Fuel & Power sector to increase by 2.8 per cent. The fuel adjustment rate increased for a third successive month.

Food

The Food sector climbed 0.4 per cent in March following no changes in February. Leading higher prices were reported for: lettuce (+ 4.2 per cent), mayonnaise (+4.2 per cent) and frozen fish (+ 3.7 per cent).

Health & Personal Care

Following two successive months of no change, the Health & Personal Care sector advanced 0.1 per cent in March. On average, the cost of prescribed medicine rose by 2.0 per cent. However, self-prescribed medicines decreased by 0.4 per cent.

Household Goods, Services & Communications

The Household Goods, Services & Communications sector remained static in March as it was in February.

Education, Recreation & Reading

The Education, Recreation & Reading sector remained static for the month. Pet up-keep costs increased 0.6 per cent while fuel prices fell 1.9 per cent.

Tobacco & Liquor

There was no movement in the Tobacco & Liquor sector. The cost of beer increased by 0.2 per cent but was offset by a 0.1 decrease in the cost of wine.

Clothing & Footwear

The Clothing & Footwear sector was unchanged in March as it was in February.

Rent

The Rent sector declined 0.5 per cent this month after increasing 0.1 per cent in February. The decrease was attributed to the 0.9 per cent drop in properties not subject to rent control. In contrast, rental units subject to rent control increased by 0.1 per cent.

COMPUTING PRICE INCREASES

The Department of Statistics receives numerous calls daily requesting the rate of inflation over specific periods of time. The following calculations are provided to guide users as to how to compute rates of price increases. The monthly index numbers can be obtained from our website www.statistics.gov.bm.

a) Month-to-Month Price Change

The price change between November and December, 2012 is calculated as follows:

$$= \frac{\text{Dec 12 index} - \text{Nov 12 index}}{\text{Nov 12 index}} \times 100$$

$$= \frac{120.1 - 120.5}{120.5} \times 100$$

$$= -0.3\%$$

b) Year-to-Year Price Change

The price change between December 2011 and December, 2012 is calculated as follows:

$$= \frac{\text{Dec 12 index} - \text{Dec 11 index}}{\text{Dec 11 index}} \times 100$$

$$= \frac{120.1 - 117.9}{117.9} \times 100$$

$$= 1.9\%$$

c) Particular Period Price Change

The price change between February 2010 and January, 2013 is calculated as follows:

$$= \frac{\text{Jan 13 index} - \text{Feb 10 index}}{\text{Feb 10 index}} \times 100$$

$$= \frac{120.3 - 111.7}{111.7} \times 100$$

$$= 7.7\%$$

WHAT IS THE CONSUMER PRICE INDEX?

The Consumer Price Index (CPI) is a statistical tool used for measuring changes in the general level of prices of consumer goods and services purchased by private households.

The index measures price movements of a given quality and quantity of goods and services. The mix of these consumer goods and services comprising the index, are figuratively thought of as a “shopping basket.” In constructing this “shopping basket”, the selected goods and services are organized first by commodity type. They are then divided into sub-components and assigned to a major expenditure group. The Bermuda CPI is structured into nine expenditure groups or sectors:

- Food
- Rent
- Clothing & Footwear
- Tobacco & Liquor
- Fuel & Power
- Transport & Vehicles
- Household Goods, Services & Communications
- Education, Recreation & Reading
- Health & Personal Care

CONCEPTS AND DEFINITIONS

Base Period

The time period which is used as a reference point for measuring the price change of goods and services. The base period for the Bermuda CPI is April 2006.

Price Index Number

A single figure that shows how a set of prices has changed over a specified period of time. An index number on its own means nothing. It must be compared with an index number from another period to have meaning. For example, a comparison of the index number 79.1 for January 1998 with 82.9 for January 2000, reveals that prices have increased by 4.8 percent.

Laspeyres Equation

The CPI is computed using this statistical equation. This formula calculates the total amount of money a household needs today to purchase the same basket of goods and services that it bought in the base period, April 2006.

WEIGHTED AVERAGE

A mathematical formula that takes into account the relative importance of an item’s price change compared to the overall change in the sector or CPI.

Inflation

Inflation is the process of rising prices, resulting in diminishing purchasing power of a given sum of money.

Cost of Living Index

Many individuals refer to the Consumer Price Index (CPI) as a cost-of-living index. The CPI is an index of pure price change only. A cost-of-living index reflects the changes in buying or consumption patterns that consumers would ordinarily make to adjust to any change in the price of a good or service.

A COMPARISON OF RATES OF INFLATION (%) Selected Countries & Bermuda

	2009	2010	2011	2012	Mar 13
Bermuda	1.8	2.4	2.7	2.4	+2.1
United States¹	2.7	1.5	3.0	1.7	+1.5
Canada²	0.3	1.8	2.9	1.5	+1.0
