

# Global Youth Leadership Presentation

Jaiden Furbert-Jacobs

- Bermuda

# Plastic Pollution

- Recycling is not a sustainable option anymore.
- Over 90% of plastic in the world is not being recycled but thrown in our oceans and on our coast lines.
- 12 million metric tons of plastic enter our oceans each year (26.5 billions pounds of plastic).
- Plastic production is increasing each year.

*The ocean is the main food source for more than*

**3.5 billion people**

*and in the next*

**20 years**

*this number could double to*

**7 billion**

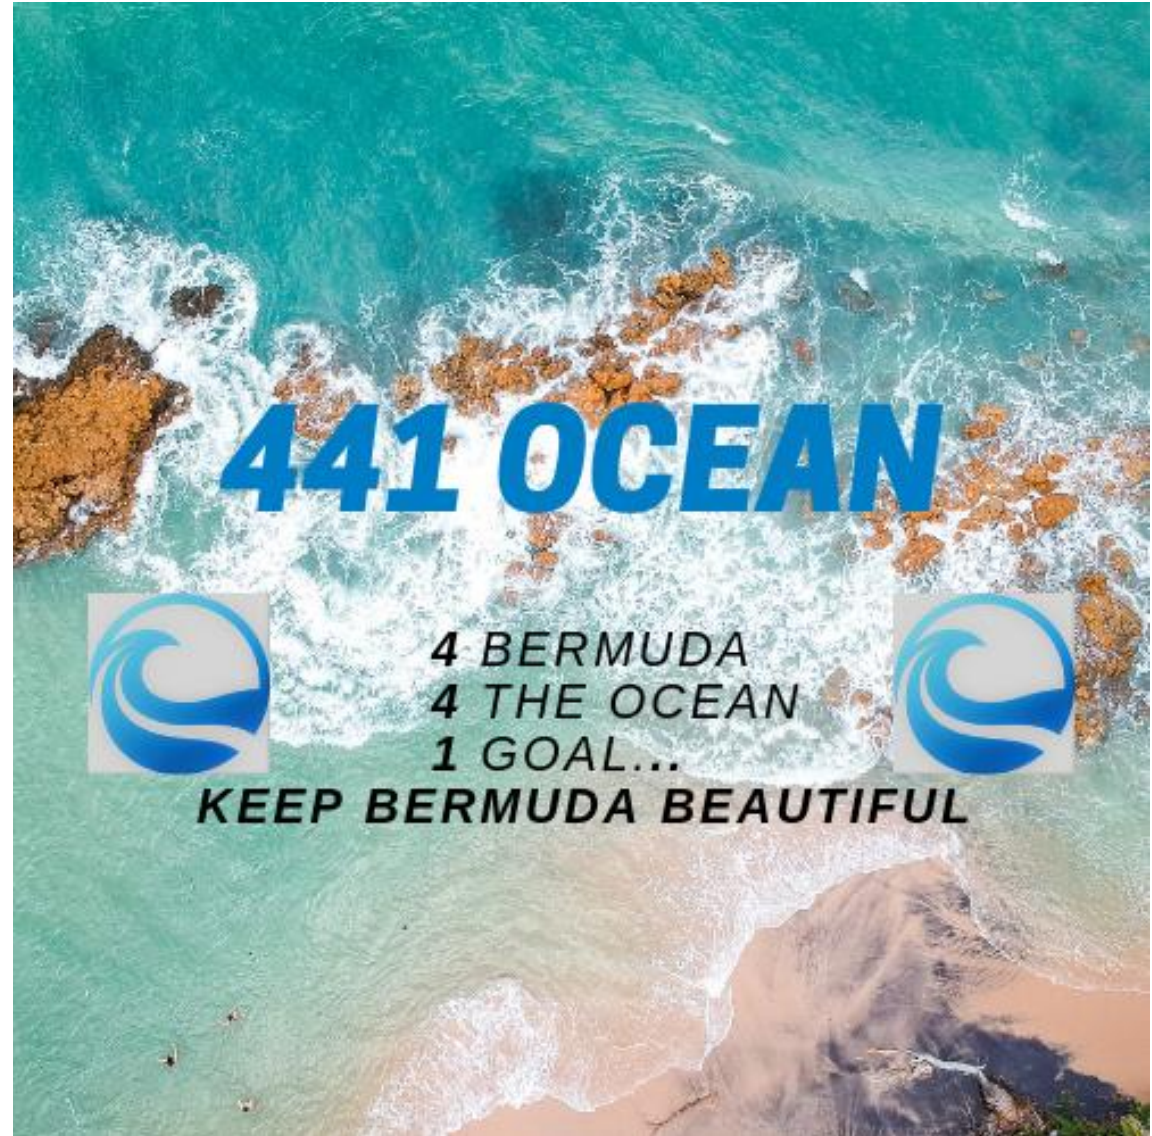

# Effecting the animals and Us

---

- Plastic is injuring and killing fish, seabirds and marine mammals.
- It kills up to a million seabirds a year.
- Research indicates that half of sea turtles worldwide have ingested plastic and some starve after mistakenly thinking they have eaten enough because their stomachs are full.
- Oceans serve as the world's largest source of protein, with more than 3 billion people depending on the ocean but researchers are finding that many fish have ingested plastic pieces.

- Non profit organization focused on the conservation of Bermuda's ocean and coastlines.
- Sustaining Bermuda through education, community events, and partnerships.
