

COVID-19 PHASES FOR SCHOOL PROTOCOLS

Transmission Risk Categories are defined by the World Health Organization.

The Country Status or Phase is defined by the Ministry of Health, Government of Bermuda.

August 25, 2021 Update: We are currently seeing rising cases in our community, including an increase in cases amongst children – as is occurring in other countries such as the U.S. The Delta variant appears to be affecting children more than the previous variants, which raises their risk-level as a group in our community.

These protocols will be reviewed regularly, taking into consideration the outbreaks in the community and vaccination status of

	staff and students. Routine Saliva screening will continue in all schools for staff and students.							
	PHASE 1	PHASE 2		PHASE 3		PHASE 4		
*	Community Transmission Cases are locally acquired and widely dispersed. There is a moderate to high risk of infection for the general population. High numbers of students, families and staff are affected/ in quarantine. It may not be possible to find sufficient numbers of substitute teachers. Student numbers may be low.	days are predominantly limited to well-defined clusters that are all linked by time, geographic location, and common exposures. This implies a low risk of infection to others in the wider community if exposure	*	Imported/Sporadic Cases Cases detected in the past 14 days are all imported, sporadic or are all linked to imported/ sporadic cases, and there are no clear signals of further locally acquired transmission. This implies minimal risk of infection for the general population. Very low numbers of students, families and staff affected/in quarantine.	*	No Confirmed Cases No new cases detected for at least 28 days. This implies a near-zero risk of infection for the general population.

Risk Assessment

least one positive case in a school or connected to a school.

Notes:

- * All colored columns represent at least one change in the safety and health protocols for that Phase/Risk Category.
- 1 Restrictions for schools, which are medium- to high-risk settings will continue to be stricter than those of the general population.
- The Mask Use Protocols changed for Primary School students, as they are under 12 years of age and cannot be vaccinated at this time. Thus, they are more vulnerable, in light of the prevalence of new COVID-19 variants of concern (VOCs). In addition, masks protect us from aerosols of the COVID-19 virus that can be exhaled or inhaled.
- ³ Consideration will be given to relax the Class Bubble Strategy more at certain phases, under the advisement to the Chief Medical Officer. Teachers'/staff's ability to socialize at school, as desired will be re-assessed, also.
- ⁴ As students under 12 years of age are not vaccinated and are from different class bubbles will be meeting in the same room(s) for the Morning and Afterschool Programs, mask use is required in light of the prevalence of new COVID-19 variants of concern (VOCs). In Bermuda (and U.S.), the July August 2021 environment shows that there has been an increasing trend of more children being infected.
- Unpredictable interactions of students and members of the public in public areas such as beaches and parks, mean that school outings cannot be held there. Contact tracing would be severely confounded.
- ** These are broad risk categories, which may not completely account for all exceptions. Thus, if there is an outbreak in your class, school, or locality, it may be necessary to revert to stronger mitigation or the protocols of a different phase, temporarily. Each phase is risk-based, and we have taken into consideration many risk factors, in the context of local cases, including those in in local schools.
- *** Please note: Failure to follow the protocols, increases your risks with broader repercussions e.g., further disruption to learning, wherein an entire year-level/whole school will likely be affected/quarantined, when the Class Bubble Strategy was not adhered to. Also, parents and the wider community would be affected by school positive cases.
